Letter of Recommendation

For Arnav Dhiman

Date - 10 Dec 2025

To Whom It May Concern,

I am pleased to recommend Arnav Dhiman, who participated in the AI/Tech cohort from November to December 2025 on the project “Fake News Detection and Social Sentiment Analysis.” Arnav quickly distinguished himself through his strong affinity for mathematics and his enjoyment of breaking concepts down into first principles. He showed a solid grasp of the project’s core themes and was consistently curious about the “why” behind algorithms, patterns in data, and model behavior.

Arnav approached tasks in a structured way, iterating thoughtfully on his ideas and supporting his work with relevant data. He collaborated respectfully with his peers, took initiative in managing his responsibilities, and maintained a professional, mature demeanor in all interactions. Looking ahead, Arnav is well-positioned to excel by continuing to build intuition for machine learning and by challenging himself with more ambiguous, real-world problem settings where his pattern-recognition and decomposition skills can shine.

I strongly recommend Arnav for future academic programs, internships, or research opportunities in AI, data science, or related quantitative fields. His combination of curiosity, conceptual strength, and disciplined work ethic makes him a promising candidate for advanced technical work.

Sincerely,

Gautham Muthukumar
Principal Product Manager Azure AI, Microsoft
